

TagMan™

Patent Pending

GOLD
ASSET MANAGEMENT AWARD

Save up to 40% **in time & expenditure over traditional manual asset** **verification processes**

Companies need to inspect and verify assets periodically and often face the challenge of limited or incorrect functional location data. The use of paper-based records is time consuming, can lead to further rework and there is the issue of relating external photos and support data e.g. P&ID drawings.

Objective

Efficient and accurate asset verification system

Common Challenge

Time-consuming and unreliable manual system

Solution

TagMan™

Introducing TagMan™ - leveraging the capabilities of tablet technology, **TagMan™** allows the electronic allocation and capturing of asset data from field based inspection and verification activities. The reduction in site time and unnecessary rework delivers direct cost savings.

TagMan™ provides search functionality, multiple customisable data fields, and the assigning of documents, drawings and multiple photos to a specific asset.

Removing the requirement to carry clipboards and associated support documentation, **TagMan™** installed on a tablet device with shoulder strap carry case, provides a safer solution when accessing equipment or areas of operation, for example, climbing ladders.

TagMan™ comes with a web based portal allowing assignment, management, analysis and real time reporting of data and progress.

TagMan™ Features and Benefits

- ✓ Eliminates manual report writing
- ✓ Upload/download data from any CMMS/database
- ✓ Web based reporting allowing real time activity status monitoring
- ✓ Up to 32 customisable data fields
- ✓ Simple data sync and file import/export
- ✓ Easily navigate parent/child asset hierarchy
- ✓ Multiple high resolution photos of assets can be taken and stored against each item
- ✓ Upload related attachments for each asset
- ✓ Mark up of drawings & documents e.g. P&IDs
- ✓ Works with cellular, wireless, or completely offline
- ✓ Synchronise devices using Bluetooth
- ✓ Barcode scanner
- ✓ Intuitive search function, including barcode scan search
- ✓ GPS positioning
